NotebookLM Literature Review

Views of the exercise

Austin/Keidrick	Votes
4. Use feedback to fix what we already have then do the next project.	0
3. What we took away from the podcast is that we need to be more detailed in our infromation in order to help other understand our points	0
!. Yes we did enjoy the podcast exercise because of how we used AI in order to deliver our ideas and current progress in the project.	0
I believe that the podcast could have been more detailed by the AI, but that issue may be the fault of our human input.	0

Sidney/Fowler	Votes
1. Did you like the exercise? Yes, enjoyed hearing the podcast though we were confused where to upload sources for it.	0
2. Did you find the podcast useful? No, it was interesting but we didn't correctly upload our sources so the AI did not add much new material.	0
3. Lessons from the podcast. The more sources and material we give it the more that the AI will be useful.	0
4. Our Next Step Rework our sources for the notebook and to start coding the project.	0

Tomas/Tiago/Gustavo	Votes
3) Lessons from the podcast. (Which) The more we specify what we want to listen, the AI will "obey" the orders and change the course to talk about it	0
1) Did you like the exercise? Why? Yes, we liked it because it helped us to set the bases of what are we going to do and how. Also we found interesting the fact that there also exist some people that tried to do similar projects throughout the years.	0
2) Did you find the podcast useful? Why? In some way yes. But we found it more interesting than useful. We got surprised on how the AI can generate a coherent conversation between two persons with the little information that we provided and also say things that we already thought before.	0

4) What is your next step? Our next step will probable be gather information from our games and order them in a grid or spreadsheet	0

Cristian/Jackson/Ariel	Votes
We did like it. It was fun to work with a new AI tool and see the amazing things that AI is creating every day.	0
Of course we do, it was super useful to hear the resume of the literature review.	0
- AI is growing at a pace we didn't think years ago. - The podcast highlights the most essential part of every source. - Focusing on the presentation and adequately communicating the project's core ideas is vital.	0
We will analyze the data, conduct statistical analysis, and extract the first findings.	0

Donna/Kelli	Votes
1. Did you like the exercise? Why or why not? I (KM) felt the exercise was useful because it helped us to find ways to both articulate what we wanted our research to be, and helped us to find sources that were actually relevant to the specific areas we want to focus on with our art datasets.	0
2. Did you find the Podcast useful? I (KM) think the podcast was useful because it helped us to understand what sources were actually relevant to our research and was an easy way to sort our data.	0
3. Lessons from Podcast? From the podcast, we learned which of our sources were relevant to our project, and how easy it would be for someone to understand the purpose of our project.	0
4. Next steps? IDK. Probably going through our dataset and sorting info/ discarding irrelevant info about the works.	0

Joseph/Carter/Braden	Votes
1. We liked it because It got us to deep dive on our project subject, and also see how people online tackled the same project.	0

2. We found the podcast useful because it used up to date information on our topic and gave us an idea on what our next steps should be. Only downfall to the podcast was it talked about forests which had nothing to do with our topic	0
3. A lesson we learned is it was hard to find people who have done fantasy football analysis and wrote about it.	0
4. Our groups next steps are to take what we learned from our sources in the last sprint review, and deliver a model from already collected data for our topic and come up with an analysis	0

Chris/Isaac	Votes
2. Yes, the podcast was highly informative and the AI podcasters were energetic, similar to real-life sports announcers. Which Isaac and I both found entertaining.	0
1. No, because the podcast does not have a prompt option. This makes it difficult to direct the podcast in a specific direction.	0
3. Scholarly sources on fantasy football are extremely difficult to find.	0
4. Find a way to scrape data on fantasy football, which proves difficult given the massive volume of data but a surprising lack of specific, extractable data.	0

Johnzelle/Suyog	Votes
1- yes - The assignment was rather simple (for point)	1
3- One of the lessons we learned from the podcast is the more sources we utilize the more detailed and polished the podcast sound.	0
4- Go through the sources one more time and search for more relevent information about the platforms	0
2- Yes the podcast allowed us to validate our sources.	0
